WORK INTEGRATED LEARNING PROGRAMMES

XR Simulation Learning Platform

Phase 1 · Student LMS — UI/UX Progress Review

Project Progress & Product Discussion

12 August 2026

Review 005 approved baseline · 29 Student screens defined · Decisions D-01 – D-25

Where We Are Today

Status by workstream — not a single overall percentage

ADVANCED

Product Understanding & Requirements

- Phase-1 requirements analysed
- Student scope defined
- FRD traceability established

ADVANCED

UX / Product Definition

- Information architecture
- User journeys mapped
- Decisions D-01 – D-25
- 29-screen inventory

IN TRANSFER

Visual Design

- High-fidelity Student experience created
- Design system specified
- Native Figma foundations started

NOT STARTED

Software Development

- Awaiting UI/UX review and sign-off
- Implementation planning follows sign-off

FOCUS

Complete native Figma → PM review → UI/UX sign-off → development planning

Phase 1 Scope

One Student experience, two audiences, four simulation formats

Student Desktop LMS

B2B — Institutional Student

ASSIGNED ACCESS

- Institutional SSO preferred
- Assigned / licensed learning
- Institution context shown
- No irrelevant purchase prompts

B2C — Individual Learner

PURCHASED ACCESS

- Individual self-registered account
- Explore catalogue
- Module / Bundle purchase
- Checkout and entitlement

SHARED LEARNING EXPERIENCE

Home | My Learning | Courses | Modules | Learning Resources | Simulations | Assessments | Progress | Profile

SIMULATION FORMATS

WEB | VR | MR | AR

Licensed XR modules stay visible on desktop with device-specific guidance

From FRD to an Implementable Student Experience

Every stage below is complete and recorded in the repository

FRD → **Requirements Analysis** → **Product Decisions** → **Information Architecture** → **User Flows**

29-Screen Inventory → **Wireframes** → **High-Fidelity UI** → **Accessibility Review** → **Developer Handoff**

131	78	29	D-01 – D-25	Review 005
FRD requirements accounted for	Phase-1 requirements classified	Student screens defined	approved product decisions	approved baseline

Repository documentation is now the source of truth for the UI/UX baseline. Coverage indicators, not performance metrics.

Key Product Decisions Now Defined

Twenty-five confirmed decisions, grouped into what they change for the Student

1 Audience

- B2B and B2C share one learning core
- Branch only where experience truly differs

2 Learning Structure

- Course → Module → Resources
- → Simulation → Assessment

3 Progression

- Sequential gating inside a course
- A locked step always names its prerequisite

4 Standalone B2C Module

- Available immediately after purchase
- Internal progression still applies

5 Commerce

- Purchasable: Module, Bundle
- A Course is not directly purchasable

6 Assessment

- 10 MCQs · 20 minutes total
- +2 correct · +1 after hint · −1 wrong · 0 blank
- Pass 10/20 · unlimited attempts

Score floor: the displayed assessment score can never fall below 0. Negative marking still applies to each wrong answer; only the reported total is floored.

Student Learning Journey

One deterministic path — the system always knows the next step

Login / SSO → Home → My Learning → Course → Module

INSIDE A MODULE — SEQUENTIAL

Required Learning Resources → Simulation → Assessment → Pass → Module Complete → Next Module Unlocks

REQUIRED OPTIONAL **Optional resources never block progression.**

B2C BRANCH

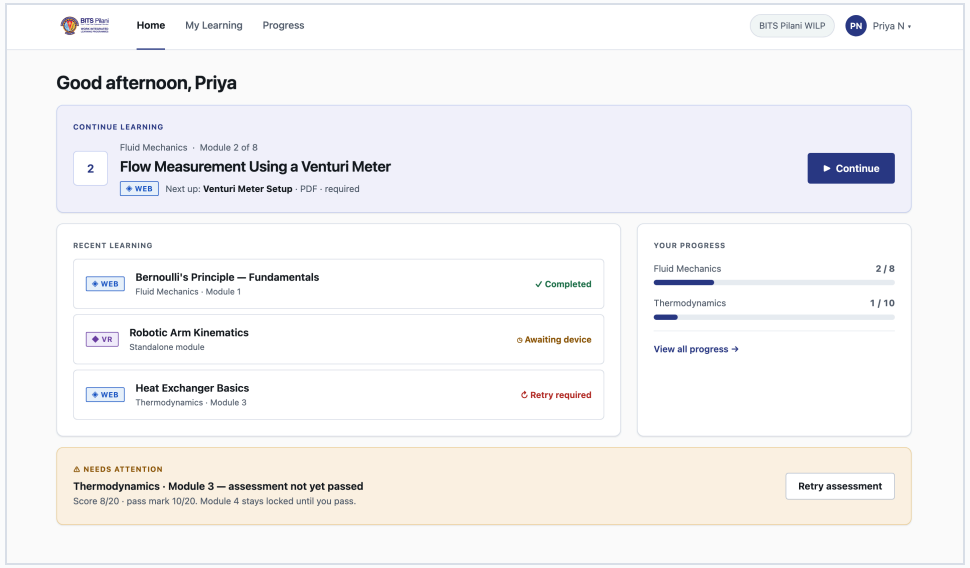

Standalone purchased module → Available immediately → Same internal sequence

No previous-module prerequisite

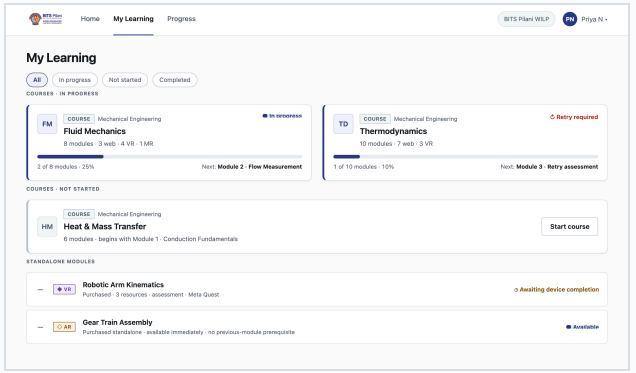

A module completes only when required resources, the simulation, and a passed assessment are all satisfied.

Student Experience — High-Fidelity Progress

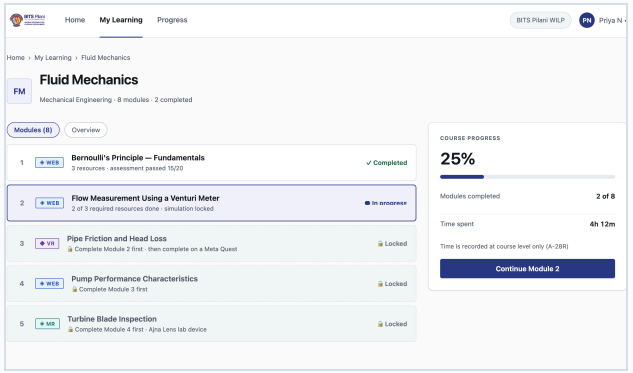

All 29 approved screen IDs are represented in the Review-005 high-fidelity baseline

STU-09 Assessment

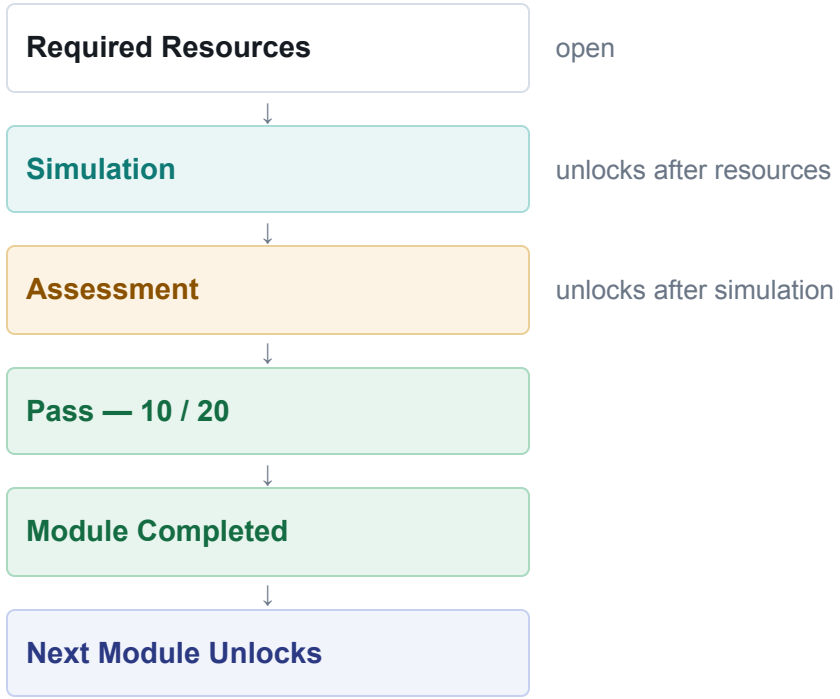

SCREEN GROUPS

Authentication & onboarding	7	Student learning	14
B2C commerce	5	System states	3

Learning Progression & Assessment Rules

How a module completes, and how an attempt is scored

MODULE COMPLETION

ASSESSMENT SCORING

Correct	+2
Correct after a hint	+1
Incorrect	−1
Unanswered	0
Pass mark	10 / 20
Attempts	Unlimited

- Hints guide the Student but never reveal the answer.
- After an attempt: Correct / Incorrect / Unanswered per question — never the answer key.
- Timer and unlock state are designed to be server-authoritative during implementation.

A locked step never shows an active button — it states which prerequisite is outstanding, by name.

XR Access and B2C Commerce

How simulations reach the right device, and how individual learners buy

XR SIMULATION ACCESS

- **WEB** — Launch in browser
- **VR** — Meta Quest guidance
- **MR** — Ajna Lens / institutional lab
- **AR** — Mobile continuation

Completion recorded against account → **LMS reflects it** → **Next step unlocks**

The UX does not invent an unconfirmed cross-device pairing mechanism.

B2C PURCHASE PATH

1. **Explore**
2. **Module / Bundle**
3. **Checkout**
4. **Secure payment**
5. **Entitlement**
6. **My Learning**

Course purchase — not part of the current model

SAMPLE DESIGN DATA Prices shown in the designs are placeholders, not approved commercial values.

Licensed XR modules are never hidden on desktop — and a Course remains a structural concept, not a product.

Quality Built Into the Design

Not only screens — interaction behaviour and implementation contracts are specified

1 Accessibility

- Designed toward WCAG 2.2 AA
- Focus and keyboard behaviour specified
- 24px minimum interaction target
- Caption / transcript / audio-description slots
- Accessible assessment behaviour
- Errors never rely on colour alone

Full WCAG conformance cannot yet be claimed until implemented and tested.

2 Edge Cases

- Session expires during an assessment
- Assessment submission failure
- XR completion never received
- Licence restriction reached
- Payment result unknown
- Content withdrawn between sessions

Each one states what happened and what the Student can do next.

3 Developer Handoff

- Assessment timing contract
- Autosave behaviour
- Video coverage vs playhead position
- Server-side module unlock
- Account-level XR completion
- Payment-state handling

Written so estimation and build can start from a defined contract.

This is not only screen design — the behaviour a static mockup cannot show is documented alongside it.

Native Figma Status & Current Constraint

Repository design is advanced; the native Figma transfer has started and continues

COMPLETE

Built in native Figma

- Three-page file structure
- Foundations section
- Colour system
- 4 variable collections
- 187 variables
- Design System section structure

REMAINING

Still to transfer

- Typography styles
- Component library
- UX / wireframe transfer
- 29 native Student screens
- Prototype connections
- Figma QA pass

CONSTRAINT

The current Figma Starter plan limits automated operations. The automated native transfer reached the available plan quota, so the remaining Figma work continues through a controlled manual / assisted workflow unless a paid workspace becomes available.

No design work is lost. The approved Review-005 repository remains the design source of truth, and Figma completion can continue manually. A paid workspace would accelerate the transfer but is not required to continue the project.

Decisions Needed & Next Steps

Six clarifications would remove the largest remaining unknowns

FOR PM / PRODUCT DISCUSSION

1. **Brand assets** — PM DECISION
   Is there an approved brand guide, vector or reversed logo?
2. **Profile data ownership** — PM DECISION
   Which Student fields are editable, and which stay ERP-controlled?
3. **B2B / B2C identity linking** — PM DECISION
   Should one person share or separate learning identities?
4. **Descriptive assessments** — PM DECISION
   Who evaluates written answers, and how does Pass/Fail return?
5. **B2C commercial rules** — PM DECISION
   Currency, tax, payment, invoice and access-duration expectations.
6. **Accessibility & responsive** — PM DECISION
   Extended-time policy, media accessibility owner, mobile phase.

IMMEDIATE NEXT STEPS

1. Complete native Figma
2. PM UI/UX review
3. Resolve priority product questions
4. Apply corrections
5. UI/UX sign-off
6. Frontend / backend planning
7. Implementation

Current focus: **Figma completion + PM review**
